

Manufacturing Process Engineering Manager

Manages department of Manufacturing Engineers activities by performing duties directly and/or through subordinate Test and Industrial Engineers, supervisors and technicians personnel, is Responsible for planning, designing and installation of manufacturing systems. Plans, conducts and oversees engineering projects, manufacturing assignments, which are complex and difficult and require expert application of engineering for the development and implementation of production equipment. Coordinates with other departmental managers to establish production and quality control standards of equipment.

Reviews and approves critical equipment maintenance and plans to ensure timely equipment repair and regulatory compliance while minimizing production down-time. Works closely with design engineering on new product introductions and quality assurance to reduce scrap. Drives process improvement through strong analytical reviews and technical mentoring. Provides process engineering support to product development activities in order to facilitate the timely introduction of new products; these activities may include the development of new processes in conjunction with other departments.

Establishes and maintains effective work relationships within the departments and the management.

Responds to product non-conformances and provides solutions to correct and prevent recurrence through re-design of existing components or processes. Participates to material review boards either directly or by assigning alternate staff personnel to provide timely disposition of non-conforming material. Reports to the Head of Engineering.
